MATERIAL SAFETY DATA SHEET

SRM Supplier: National Institute of Standards and Technology

Standard Reference Materials Program

Bldg. 202 Rm. 211

Gaithersburg, Maryland 20899

SRM Number: 3114 MSDS Number: 3114

SRM Name: Copper Standard Solution

Date of Issue: May 1990

Date of Revision: February 22, 1999

FAX: (301) 926-4751

E-mail: SRMMSDS@nist.gov

SECTION I. MATERIAL IDENTIFICATION

Phone: (301) 975-6776

ChemTrec: 1-800-424-9300

Material Name: Copper Standard Solution

Description: SRM 3114 is a single element solution prepared gravimetrically to contain a nominal 10 mg/mL (or 10 mg/g) of copper

with a nitric acid volume fraction of 10 %.

MSDS Coordinator: Joylene W.L. Thomas

Other Designations: Copper in Nitric Acid (aqua fortis; hydrogen nitrate; azotic acid; engravers acid). Copper Nitrate* (cupric

nitrate; copper dinitrate; copper (II) nitrate; nitric acid, copper (2+) salt) in Spectrometric Standard Solution.

NameChemical FormulasCAS Registration NumbersNitric Acid HNO_3 7697-37-2Copper Nitrate $Cu(NO_3)_2$ 3251-23-8CopperCu7440-50-8

DOT Classification: Nitric Acid Solution, ID#: UN2031

Manufacturer/Supplier: Available from a number of suppliers

*The addition of copper to nitric acid, along with other intermediate chemical reactions, forms copper nitrate which will precipitate upon evaporation or drying of the solution.

SECTION II. HAZARDOUS INGREDIENTS

Hazardous Components	Nominal Concentration (%)	Exposure Limits and Toxicity Data	
Nitric Acid	10	ACGIH TLV-TWA: 2 mg/kg or 5 mg/m ³	
		OSHA TLV-TWA: 2 mg/m³ or 5 mg/m³	
		Human, Oral: LD _{LO} : 430 mg/kg	
Copper Nitrate	3.0	No TLV-TWA established for copper compounds.	
		Rat, Oral: LD ₅₀ : 794 mg/kg	
Copper	1	ACGIH TLV-TWA (fumes): 0.2 mg/m ³	
		OSHA TLV-TWA (fumes): 0.1 mg/m ³	
		Mouse, Intraperitoneal: LD ₅₀ : 3.5 mg/kg	
		Human, Oral: TD _{LO} : 120 μg/kg	

SECTION III. PHYSICAL/CHEMICAL CHARACTERISTICS

MSDS 3114 Page 1 of 4

Nitric Acid	Copper Nitrate	Copper
Appearance and Odor: A white to slightly yellow liquid that darkens to a brownish color upon aging and exposure to light; material has an irritating odor.	Appearance and Odor: A yellow to blue deliquescent crystal; odorless.	Appearance and Odor: A red lustrous crystal; odorless.
Relative Molecular Mass: 63.02	Relative Molecular Mass: 187.56	Relative Atomic Mass: 63.5
Density: 1.0543 (10 % nitric acid)	Density: 2.32	Density: 8.92
Solubility in Water: Soluble	Solubility in Water: Soluble	Solubility in Water: Insoluble
Solvent Solubility: Decomposes in alcohol.	Solvent Solubility: Soluble in ethyl acetate, dioxane, alcohol, and ether.	Solvent Solubility: Soluble in nitric acid, hot concentrated sulfuric acid, and hot hydrogen bromide; slightly soluble in hydrochloric acid and ammonium hydroxide.

Note: The physical and chemical data provided are for pure compounds. Physical and chemical data for this copper/nitric acid solution do not exist. The actual behavior of this solution may differ from the individual components.

SECTION IV. FIRE AND EXPLOSION HAZARD DATA

Flash Point: N/A Method Used: N/A Autoignition Temperature: N/A

Flammability Limits in Air (Volume %): UPPER: N/A LOWER: N/A

Unusual Fire and Explosion Hazards: Although nitric acid does not burn, it is a powerful oxidizing agent that can react with combustible materials to cause fires. Copper nitrate is a negligible fire hazard, but may ignite or explode when exposed to combustible materials.

Extinguishing Media: Use extinguishing media that is appropriate to the surrounding fire. Use a water spray to dilute nitric acid and to absorb liberated oxides of nitrogen.

Special Fire Procedures: Fire fighters should wear a self-contained breathing apparatus (SCBA) with a full face piece in the pressure demand or positive mode and other protective clothing.

SECTION V. REACTIVITY DATA

Stability: X_ Stable	Unstal	ol	E
----------------------	--------	----	---

Conditions to Avoid: Avoid contact with combustible and other incompatible materials.

Incompatibility (Materials to Avoid): Keep nitric acid away from organic materials, plastics, rubber, and some forms of coatings. Nitric acid is incompatible with chlorine and metal ferrocyanide. Avoid metals, metal oxides, hydroxides, amines, carbonates, and other alkaline materials, cyanides, sulfides, sulfates, and formaldehyde. Copper nitrate is incompatible with reducing agents, metals, metal salts, and acids. Copper is incompatible with acids, oxidizing materials, metal salts, bases, halocarbons, halogens, peroxides, reducing agents, and metal oxides.

See Section IV: Unusual Fire and Explosion Hazards.

MSDS 3114 Page 2 of 4

Hazardous Decomposition or Byproducts: Hazardous decomposition of nitric acid and/or copper nitrate can produce various nitrogen oxides, including nitric oxide (NO), nitrogen dioxide (NO₂), nitrous oxide (N₂O), as well as nitric acid mist or vapor. Will Occur X Will Not Occur **Hazardous Polymerization:** SECTION VI. HEALTH HAZARD DATA __X_ Skin Route of Entry: \underline{X} Inhalation _X_ Ingestion Health Hazards (Acute and Chronic): Nitric Acid: Nitric acid may be fatal if inhaled, swallowed, or absorbed through skin. This material causes burns and is extremely destructive to tissue of the mucous membranes and upper respiratory tract, eyes, and skin. Inhalation may be fatal as a result of spasm, inflammation and edema of the larynx and bronchi, chemical pneumonitis, and pulmonary edema. Symptoms of exposure may include burning sensation, coughing, wheezing, laryngitis, shortness of breath, headache, nausea, and vomiting. Copper and Copper Nitrate: Copper and copper nitrate may be harmful by inhalation or ingestion. These materials may cause irritation to skin, eyes, mucous membranes, and upper respiratory tract. Copper nitrate may cause burns. Short term exposure to copper dust or fumes may cause "metal fume fever," which is a transient condition characterized by fever and chills. Chronic or long term exposure may result in lung x-ray changes not associated with harmful effects. Signs and Symptoms of Exposure: Irritation, difficulty breathing, burning sensation, and yellow skin discoloration can result from contact with nitric acid. Stomach pains, vomiting, diarrhea, fever, and chills are connected with exposure to copper and related compounds. Medical Conditions Generally Aggravated by Exposure: Eye disorders, skin disorders, respiratory disorders, and allergies. Copper and copper nitrate also affect Wilson's disease and disorders of the kidneys, liver, and blood system. Listed as a Carcinogen/Potential Carcinogen: Yes No In the National Toxicology Program (NTP) Report on Carcinogens In the International Agency for Research on Cancer (IARC) Monographs By the Occupational Safety and Health Administration (OSHA)

EMERGENCY AND FIRST AID PROCEDURES:

Skin Contact: Remove contaminated shoes and clothing. Rinse affected area with large amounts of water followed by washing the area with soap and water. Watch for chemical irritations and treat them accordingly. Obtain medical assistance if necessary.

Eye Contact: Immediately flush eyes, including under the eyelids, with copious amounts of water for at least 15 minutes. Obtain medical assistance.

Inhalation: If inhaled, move the victim to fresh air. If breathing is difficult, give oxygen; if the victim is not breathing, give artificial respiration. Obtain medical assistance if necessary.

Ingestion: If ingestion occurs, wash out mouth with water. DO NOT induce vomiting. Obtain medical assistance immediately.

Note (Nitric Acid): Wash affected skin areas with 5 % solution of sodium bicarbonate (NaHCO₃). If ingested, the risk versus the benefit of the passage of a naso-gastric tube is debatable. Activated charcoal is of no value. DO NOT give the exposed person bicarbonate to neutralize the material.

TARGET ORGAN(S) OF ATTACK: Nitric Acid: The skin, teeth, eyes, and upper respiratory tract

Copper and Copper Nitrate: The skin, eyes, upper respiratory tract, and mucous membranes

MSDS 3114 Page 3 of 4

SECTION VII. PRECAUTIONS FOR SAFE HANDLING AND USE

Steps to be Taken in Case Material is Released or Spilled: Notify safety personnel of spills. Surfaces contaminated with spills should be covered with soda ash or sodium bicarbonate to neutralize the acid. Place the neutralized material into containers suitable for eventual disposal, reclamation, or destruction.

Waste Disposal: Follow all federal, state, and local laws governing disposal.

Handling and Storage: Provide general and local explosion proof ventilation systems to maintain airborne concentrations below the TLV. Provide approved respiratory apparatus for nonroutine or emergency use. Use an approved filter and vapor respirator when the vapor or mist concentrations are high. Wear gloves and chemical safety glasses where contact with the liquid or high vapor concentrations may occur. An eye wash station and washing facilities should be readily available near handling and use areas. Wash exposed skin areas several times a day with soap and warm water.

Store under normal laboratory conditions in an upright position.

Note: Contact lenses pose a special problem; soft lenses may absorb irritants and all lenses concentrate them. **DO NOT** wear contact lenses in the laboratory.
